

TANGRAM

Ova poznata i drevna slagalica potječe iz Kine. Tangram je matematička slagalica koja se sastoji od sedam geometrijskih oblika, koji složeni tvore kvadrat. Tu su dva mala, jedan srednji i dva velika trokuta, jedan paralelogram i jedan kvadrat.

Cilj je oblikovati određeni oblik (zadan je samo obris ili silueta) a pravila su:

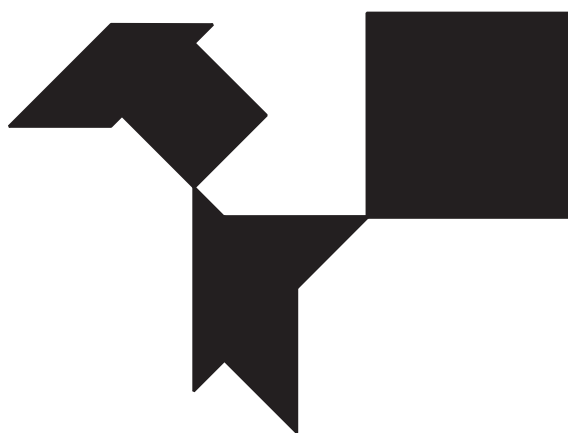

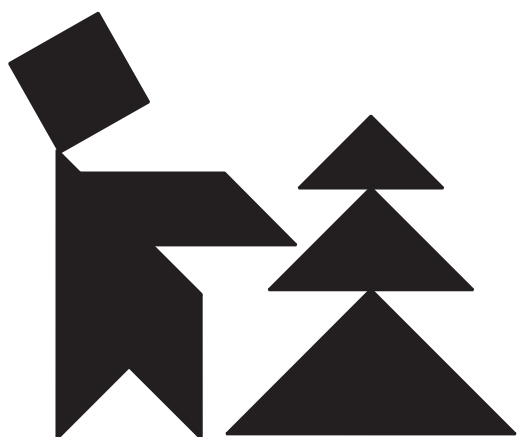

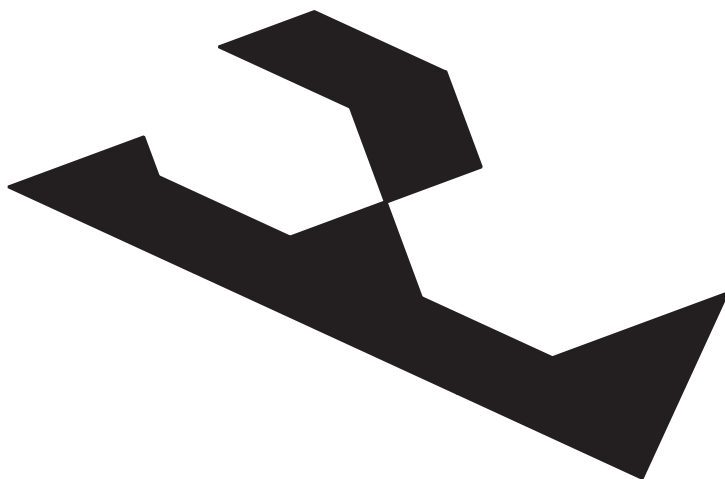

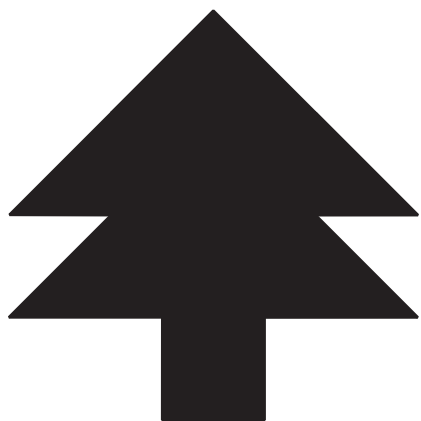

- Uvijek se mora upotrijebiti svih sedam dijelova,
- Dijelovi se postavljaju jedan do drugog, ne smiju preklapati,
- Dijelovi se po potrebi mogu preokrenuti na drugu stranu.

Izrežite iz predloška 7 dijelova tangrama i koristite ih za slaganje zadanih oblika.
